

MEASUREMENT SHEET Date measured.....

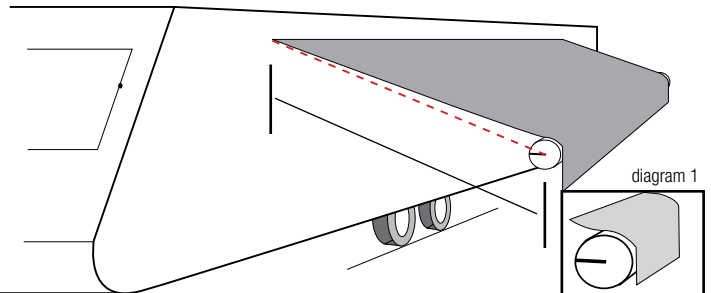

Measuring the van for the annexe is as easy as 1 2 3.
First measure the length, then the width, then the height.
then measure the draft strip last.

Simply follow the instructions below, enter the measurements carefully and clearly, double check and then send it to us with the Order Form and the Authorisation Form.

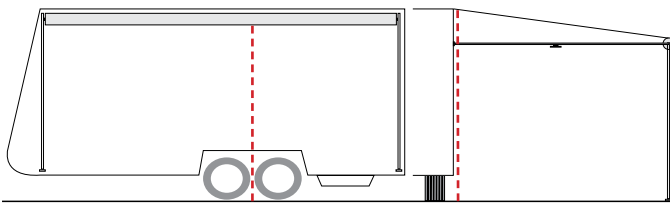

The Length: *

The length is simply measured from one edge of the awning vinyl to the other.

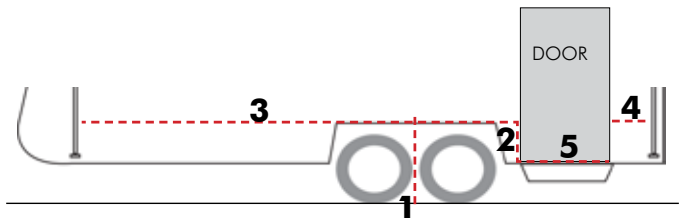

The Width: *

The width measurement is taken from the awning sail track (where the awning joins to the van) out to the sail track groove in the barrel of the roll-out awning cylinder. When the awning arms are standing vertically, the position of the sail track groove should be facing back to the van. The position of this should resemble the 9 o'clock position outlined in diagram1 above.

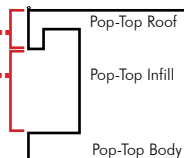

The Height: *

The height is measured from the ground to the bottom edge of the awning sail track. This measurement *MUST* be taken from the centre of the wheels.
 Please note:- unlevel ground will not affect this measurement

(Extra measurements *1..... required for Pop-Top) *2.....

The infill measurement (1) is required from the sail track of the roll-out awning, down to the bottom of the roof lip, then down (2) to the top of the caravan body.

The Draftstrip:

- 1** Measure from ground to the desired height above wheel arch and mark. -
- 2** Measure from the marked point above the wheel arch to the bottom of door -
- 3** Measure from door to centre centre of roll-out awning bracket (where awning arms attach) -
- 4** Repeat step 3 on opposite side of door -
- 5** Measure width of door -
- 6** Is door stop in way of draftstrip - Yes () No ()
- 7** Is there a drop-down step - Yes () No ()
- 8** Is there a window in way of sail track - Yes () No ()
